

Spine Candle Holder found on Thingiverse.

Printer on the Up printer.

I scaled the print down because I have slimmer candles hoping that it will hold the candle better but didn't want to make it too small for it is already a pretty slim form and might loss balance if the bottom got scaled down too much.

It looks very nice and cozy with the black candle.

We like to put it next to the window when we hangout on our balcony. My roommates use it as a fancy cigarette lighter.

The candle holder is a very nice decoration for my room and for special events. It adds more fun to the house.

However, I found out in class that ABS is very flammable so thankfully nothing bad happened when I was using the tool, I am going to make a mold with the print and make the candle holder with some other material but I am not going to use the printed ABS candle holder ever again!!
